ALMA MATER STUDIORUM
UNIVERSITÀ DI BOLOGNA

DIPARTIMENTO
DI FISICA E ASTRONOMIA
"AUGUSTO RIGHI"

The whom it may concern.

I am pleased to support Mr. Simone Rea in his application to the Ladybird Guide to Spacecraft Communications programme. Simone is currently in his second year of the Bachelor's Degree in Computer Engineering at the University of Bologna, and I serve as his General Physics professor. Throughout my course, he has distinguished himself as a highly motivated and capable student with strong analytical reasoning and a remarkable ability to grasp complex physical concepts.

Simone pairs his academic strengths with relevant technical and engineering experience. As a member of Unibo Motorsport, he contributed to the driverless department, developing software in Python and ROS2, and working on simulation environments using Unity. These activities required precision, teamwork, and problem-solving skills, qualities he consistently demonstrated. In parallel, his involvement with the ADM Staff student group has exposed him to system administration and software engineering through real projects, as well as peer-education activities such as workshops on Git and shell tools.

Beyond his technical profile, Simone stands out for his excellent communication skills, maturity, and collaborative attitude. His English proficiency (C1–C2, IELTS) ensures that he can participate effectively in an international context, while his intellectual curiosity and reliability make him a valuable presence in any team. He has shown a growing interest in space technologies, and he approaches this field with both enthusiasm and rigor.

Given his academic preparation, technical abilities, and strong motivation, I believe Simone would greatly benefit from—and contribute positively to—the ESA Academy environment. I therefore recommend him with confidence for the Ladybird Guide to Spacecraft Communications programme.

Please feel free to contact me for any further information.

Sincerely,

Prof. Lorenzo Rinaldi
