To the Selection Committee,

My name is Simone Rea, and I am a third-year Computer Engineering student, currently maintaining a GPA of 29.11/30. I am presently on an exchange period at Yonsei University in Seoul, to be followed by a second exchange at TU Eindhoven.

I am deeply drawn to scientific research, and after my graduation I would welcome the opportunity to experience what research actually looks like from the inside, as I am considering continuing my career in this direction. While I do not yet have hands-on experience in Machine Learning, I am currently taking a course in Deep Neural Networks and will follow it with a Machine Learning course next semester. Much of my technical foundation, however, comes from years of independent study in areas like operating systems, computer architecture, and algorithms, which I have applied through university team projects: with the ADM Team, I developed backend services for a DNS system in Go, and with Unibo Motorsport, I worked on software infrastructure and control interfaces for autonomous systems using Python and ROS2.

I was also selected among the top 25 Computer Science students at my home university for a specialized Cybersecurity training program, which reflects both my technical standing and my drive to keep expanding into new areas.

I would be especially glad to carry out this experience at the University of Edinburgh. It is one of the leading institutions for informatics in Europe, and I have visited the city once and was genuinely captivated by both it and the university. Beyond this opportunity, it is a place I could see myself wanting to live and work in for an extended period, and this working opportunity would be a meaningful way to find out if it's the right long-term fit for me.

Thank you for considering my application.

Sincerely,
Simone Rea
